

Functional Requirements

Script-Controlled ACL | ServiceNow Micro Project

Use case: on the ServiceNow Incident table, records with Priority 1 - Critical are visible only to the assigned user, users with the incident_manager role, and admins. All other incidents follow normal access.

ID	Requirement	Priority
FR-01	The system shall evaluate a script-controlled ACL when a user reads an Incident record.	High
FR-02	The ACL shall check the value of the Priority field on the record.	High
FR-03	For Priority 1 incidents, access shall be granted only to admins, users with the incident_manager role, or the assigned user.	High
FR-04	For all other incidents, access shall be granted to users with the itil role or to the caller.	Medium
FR-05	Users who fail the check shall not see the record in lists, forms, or reports.	High
FR-06	The ACL shall re-evaluate on every request, so changing Priority changes access immediately.	Medium
FR-07	Administrators shall be able to test the rule by impersonating different users.	Medium
