

Non-Functional Requirements

Script-Controlled ACL | ServiceNow Micro Project

ID	Category	Requirement
NFR-01	Security	Default is deny. Access is granted only when the script explicitly allows it.
NFR-02	Performance	The script uses only fields on the current record and role checks, with no database queries.
NFR-03	Maintainability	The script is short, commented, and uses named variables for each condition.
NFR-04	Reliability	Behavior is the same across list view, form view, and reports.
NFR-05	Usability	Blocked users see a standard security message, not a broken page.
NFR-06	Auditability	Test results are documented with screenshots for each user type.
