

User Guide

Script-Controlled ACL | ServiceNow Micro Project

For administrators

- Elevate to security_admin, then open System Security > Access Control (ACL).
- Search for the incident read ACL and open it.
- To change the protected priority, edit the number in the script condition.
- Assign the incident_manager role to users who must see critical incidents.

For incident managers and assignees

- Open Incident > All. Priority 1 incidents you are involved in appear normally.

For other fulfillers

- Priority 1 incidents you are not assigned to will not appear in lists and cannot be opened.
- Contact an incident manager if you need access.

Testing a change

- Use Impersonate User from the user menu, open the incident, and confirm the outcome.
- Stop impersonating when finished.
