

Empathy Map

Script-Controlled ACL | ServiceNow Micro Project

Persona: ServiceNow Security Administrator responsible for protecting sensitive records.

Section	Details
Says	"Only the people working on a critical incident should see it."
Thinks	Role-based rules are too broad. I need rules that look at the record itself.
Does	Reviews ACLs, tests access with impersonation, and audits who can open which records.
Feels	Worried about data exposure, but wants a solution that does not slow the service desk.
Pains	Broad role access, hard-to-maintain ACL scripts, unclear test coverage.
Gains	Field-aware access control, fewer exposed records, and an easy way to prove it works.
